

# MediaWiki index.php aus der URL entfernen

Bei [rofro's solution](#) bedient und ein bißchen angepasst. Bis jetzt scheint alles so zu funktionieren wie es soll.

*/wiki/LocalSettings.php:*

```
$wgScriptPath      = "/wiki";
$wgScript          = "$wgScriptPath/index.php";
$wgRedirectScript  = "$wgScriptPath/redirect.php";

## If using PHP as a CGI module, use the ugly URLs
$wgArticlePath    = "$wgScriptPath/$1";
```

*/wiki/.htaccess:*

```
RewriteEngine on

# Verifying if user forgot to put trailing slash. If so, we'll rewrite to
# Main_Page
RewriteCond %{REQUEST_URI} ^/wiki$
RewriteRule ^(.*) /wiki/index.php?title=Main_Page [L]

# Don't rewrite requests for files in MediaWiki subdirectories,
# MediaWiki PHP files, HTTP error documents, favicon.ico, or robots.txt
